**SEPTEMBER SEMESTER 2015**

---

---

## INTRODUCTION

**NBNC1307 Clinical Practice 11 on Critical Care Nursing** course will focus on application of theory from the theoretical course subject **NBNS1404 Critical Care Nursing** into practicum. Hence, you are encouraged to read **NBNS1404 Critical Care Nursing** for theoretical input for your practicum in addition to this module.

Health assessment is an integral part of nursing. You may find it beneficial to revisit and review the module **NBHS1103 Advanced Nursing Assessment** to guide you in conducting assessments on critically ill patients and planning their nursing care by appropriately utilizing nursing process.

Additionally, you are also encouraged to apply all the knowledge and skills gained from your previous learning, especially relating to nursing management and professionalism.

In order to achieve **7 credit hours**, you would have to undertake BOTH the General Practicum and Specific Practicum as stipulated in the table below:

CLINICAL PLACEMENT	PRACTICUM HOURS / DURATION
<p><b>1. General Practicum:</b></p> <ul style="list-style-type: none"> <li>• Practicum takes place in your respective area of practice. Your official working hours are considered as the practicum hour.</li> <li>• You do not need a preceptor for general practicum.</li> <li>• You are self-directed in implementing your learning activities. You are expected to apply or practice skills that you have learned from the specific practicum whenever possible.</li> </ul>	<p><b>324 hours</b></p> <p>Recommended practicum hours:</p> <ul style="list-style-type: none"> <li>• 41 days per semester.</li> <li>• At least 8 hours per day for 5 days per week.</li> </ul>
<p><b>2. Specific Practicum:</b></p> <ul style="list-style-type: none"> <li>• Placement will be in an Intensive Care setting.</li> <li>• You must set aside the practicum hours separately from your official working hours.</li> <li>• A Clinical Preceptor will be assigned for you / your group.</li> </ul>	<p><b>96 hours</b></p> <p>Recommended practicum hours:</p> <ul style="list-style-type: none"> <li>• 8 hours per week x 12 weeks (on weekends only) <b>OR</b></li> <li>• 8 hours per week x 6 weeks (on weekends) + 8 hours per day x 6 days consecutively (including week days) <b>OR</b></li> <li>• 8 hours per day x 12 days consecutively</li> </ul>
<b>TOTAL : 7 credits =</b>	<b>14 weeks / 420 hours</b>

## COURSE OBJECTIVES

At the end of the **General Practicum**, you should be able to:-

1. perform skills learned from the specific practicum where applicable.
2. deliver nursing care to the clients using the nursing process approach.
3. communicate with clients as well as their families and relatives with caring and empathy.

**At the end of the Specific Practicum, you should be able to:-**

1. utilise the nursing process approach in caring for critically ill clients and their families.
2. perform health assessment as part of the nursing process.
3. acquire specialization in Critical Care Nursing.
  - i. Perform invasive hemodynamic monitoring:
    - Assist in obtaining vascular access/ arterial line.
    - Set up the transducer system.
    - Balance & calibrate pressure monitoring system.
    - Maintain the function of the pressure monitoring line.
    - Obtain blood sample from arterial line.
    - Monitor (and interpret) arterial blood gases.
  - ii. Perform non invasive monitoring:
    - Monitor oxygen saturation via pulse oximetry.
    - Monitor (and interpret) cardiac rhythm.
    - Monitor blood pressure.
    - Obtain recording of a 12 lead ECG.
  - iii. Nurse the clients on assisted breathing :
    - Provide non invasive mechanical ventilation(BiPAP / CPAP)
    - Provide invasive mechanical ventilation care:
      - Nurse client on ventilator.
      - Perform endotracheal (ETT) suctioning.
      - Assist in ETT extubation.
  - iv. Nurse client on infusion of inotropic agents.
  - v. Nurse client with (or pending) intracranial pressure.
  - vi. Perform and assist in providing cardiac life support :-
    - Insert an oropharyngeal airway.
    - Deliver cardiopulmonary resuscitation (**Please refer to Appendix 1 for the latest BLS for Healthcare Providers**)
    - Deliver ventilation using the bag-mask-valve devices.
    - Assist in endotracheal intubation.
    - Assist in defibrillation.
    - Manage foreign-body airway obstruction (choking).

### SUMMARY OF CLINICAL PRACTICE HOURS (GENERAL PRACTICUM)

Please record the summary of your Clinical Practice Hours in the table below. Make sure that you have a minimum of **324 hours of General Practicum**. This is **MANDATORY**.

Date	Time	Total Hours	Superior's Signature (e.g. Matron/Sister/Director)
<b>TOTAL HOURS</b>			

- Attach with additional paper if necessary.
- Attach the photocopies of your Roster / Records of Working Time (e.g. Punch Card)

## ASSESSMENT METHODS

You will be evaluated for the course **NBNC 1307 Clinical Practice 11** as follows:

SN	GRADED ASSESSMENT	ALLOCATION OF MARKS		REMARKS
1	Case Study	40%		Deadline for submission – <b>30 November 2015</b>
2	Clinical Practice Records: <ul style="list-style-type: none"> <li>• General Practice Hours - achieved minimum of <b>324 hours</b></li> <li>• Specialized Practice Hours - achieved minimum of <b>96 hours</b></li> <li>• Bedside Teaching – attended <b>ALL</b> Bedside Teaching sessions (4 topics)</li> </ul>	2%	10%	Attached with verified roster / record of working hours
		4%		
		4%		
3	Nursing Procedures: <ul style="list-style-type: none"> <li>• Major Procedures (10)</li> <li>• Minor Procedures (10)</li> </ul>	20%	30%	Performed under the supervision of the LP and verified
4	Oral Presentation of the Case Study	20%		20-minutes presentation
<b>TOTAL</b>		<b>100%</b>		

SN	NON-GRADED ASSESSMENT
1	Clinical Performance Evaluation ( by Clinical Preceptor): <ul style="list-style-type: none"> <li>• You will receive a non-graded feedback or evaluation from your Clinical Preceptor for your clinical performance.</li> </ul>
2	Student's Evaluation of Clinical Practicum: <ul style="list-style-type: none"> <li>• You are required to provide feedback by evaluating your clinical experience.</li> </ul>
3	Student's Evaluation of Clinical Preceptor: <ul style="list-style-type: none"> <li>• You are required to provide an evaluation of your Clinical Preceptor.</li> </ul>

## REMINDER TO CLINICAL PRECEPTORS

This Course Kit must go hand-in-hand with the module **NBNC 1307 Clinical Practice 11**. You **MUST HAVE BOTH COPIES** for your reference in planning and implementing your teaching and learning activities with the students

### TOPICS FOR BEDSIDE TEACHING – CRITICAL CARE NURSING

No.	Topic	Date	Preceptor's Signature	Student's Signature
1	Providing physical & psychological care; and communicating with client and family			
2	Nursing client with hemodynamic instability			
3	Nursing client with respiratory failure on ventilation support			
4	Nutritional needs of the critically ill client			
<b>Total Number of Session Attended</b>				
<b>Total Marks</b>				

#### PLEASE NOTE:

An attended Bedside Teaching session is entitled for a full mark of **1%**  
Total Marks for FULL attendance of **4** Bedside Teaching sessions is **4%**

**NURSING PROCEDURES ON CRITICAL CARE NURSING**

**A. MAJOR PROCEDURES – 20%**

NO.	PROCEDURES	DATE	STUDENT'S PERFORMANCE		PRECEPTOR'S SIGNATURE
			Good (2%)	Poor (1%)	
1.	Providing care to client on assisted breathing:-				
	1.1 Performing endotracheal suctioning				
	1.2 Assisting in endotracheal extubation				
2.	Performing & assisting in providing cardiac life support:-				
	2.1 Inserting an oropharyngeal airway				
	2.2 *Delivering CPR- adult				
	2.3 *Delivering CPR - paediatric				
	2.4 Managing choking- adults				
	2.5 Managing choking - pediatric				
	2.6 Delivering ventilation via bag-mask-valve devices				
	2.7 Assisting in endotracheal intubation				
	2.8 Assisting in defibrillation				
<b>TOTAL MARKS ACHIEVED</b>					

**PLEASE NOTE:**

A correctly (GOOD) performed Major Nursing Procedure is entitled for a full mark of **2%**  
 Total Marks for 10 correctly (GOOD) performed Major Nursing Procedure is **20%**

**\*(Please refer to Appendix 1 for the latest BLS for Healthcare Providers)**

**B. MINOR PROCEDURES – 10%**

NO.	PROCEDURES	DATE	STUDENT'S PERFORMANCE		PRECEPTOR'S SIGNATURE
			Good (1%)	Poor (0.5%)	
1.	Performing invasive monitoring and investigations:-				
	1.1 Maintaining the pressure monitoring line				
	1.2 Monitoring arterial blood pressure wave				
	1.3 Interpreting arterial blood gases				
	1.4 Obtaining blood sample from arterial line				
2.	Performing non invasive monitoring & investigation:-				
	2.1 Setting up ECG, SpO2 and BP monitoring				
	2.2 Interpreting cardiac rhythm				
	2.3 Recording a 12 lead ECG				
3.	Providing care to client on assisted breathing:-				
	3.1 Caring for client on ventilator				
4.	Delivering infusion of inotropic agents				
5.	Monitoring ICP (neurological chart / intraventricular catheter)				
<b>TOTAL MARKS ACHIEVED</b>					

**PLEASE NOTE:**

A correctly (GOOD) performed Minor Nursing Procedure is entitled for a full mark of **1%**  
 Total Marks for 10 correctly (GOOD) performed Minor Nursing Procedure is **10%**

**Student's Signature:**

**Date:**

**Local Preceptor's Signature:**

**Date:**

## WRITTEN ASSIGNMENT – A CASE STUDY

- You are required to write a **Case Study of a Critically Ill Client** whom you have nursed during your Clinical Practice
- The Title of the Case Study should be written as “**The Nursing Care and Management of a Client with .....**”
- The recommended framework / headings are:
  - i. Section 1: Introduction
  - ii. Section 2: Presentation of the case:
    - Demographic data
    - General health history
    - Assessment findings
    - Management and Nursing Care of the client – in chronological manner and by utilizing nursing process
  - iii. Section 3: Conclusion / summary
  - iv. Section 4: References
  - v. Section 5: Appendixes
- Your work will be assessed based on the Rubrics provided (Appendix 2)
- **Format of the Case Study:**
  - i. Words: 5,000 - 10,000 words
  - ii. Font: Arial, Size 12
  - iii. Spacing: 1.5
  - iv. Binding: combed
- You are required to perform a 20-minute Oral Presentation on this Case Study to your Tutor at the Learning Centre after the completion of Clinical Practice. Please discuss with your Tutor to identify the date for Oral Presentation
- The deadline for submission of your Case Study is on **30 November 2015**

## ORAL PRESENTATION OF THE CASE STUDY

- Mode – Power Point Presentation
- Allocated Time – 20 minutes:
  - Presentation - 15 minutes
  - Question & Answer – 5 minutes
- Prior to Presentation – submit the printed PP Slides to your Tutor (2 PP Slides per page)
- Evaluation of Presentation – using the Rubrics as provided (Appendix 3)

### Instruction

- Submit your Case Study directly to your Tutor after the Oral Presentation.
- Keep the copy of “Assignment Acceptance Verification Slip” as an evidence of submission.
- You are encouraged to keep a copy of your Case Study for future reference.

## CLINICAL PERFORMANCE EVALUATION

### **Instructions to Local Preceptor:-**

- This is a non-graded evaluation on student's performance. Tick (√) the level of performance for each criteria based on the scale. You may include additional points on the comments provided.
- Please complete the form at the end of the clinical placement.
- Please inform the student regarding the evaluation of his/her performance to enable them to improve. Have the student to acknowledge his/her performance.
- This form is part of the Clinical Practice Record and should be given to the student for compilation.
- Your evaluation is highly appreciated as an important feedback to students as well as to the Faculty.

**Name of Local Preceptor:**

**Preceptor's Designation:**

**Scale:            1= poor            2= average    3= good            4= excellent**

No	Performance Criteria	1	2	3	4
1.	<b>Appearance and Discipline:-</b>				
	1.1. Maintain cleanliness and neatness				
	1.2 Follow dress code of the organization				
	1.3 Punctual				
	1.4 Manage time effectively				
2.	<b>Communication Skills:-</b>				
	2.1 Communicate in a clear ,concise and fluent manner				
	2.2 Able to express sound opinion				
	2.3 Project appropriate non verbal communication				
3.	<b>Attitude : Responsibilities</b>				
	3.1 Adheres to protocol, policies and procedures of the organization				
	3.2 Follow standard practice and code of conduct				
	3.3 Understand the importance of preserving client's privacy and confidentiality				
4.	<b>Attitude: Assertiveness</b>				
	4.1 Demonstrate leadership skills				
	4.2 A team player / team participation				
	4.3 Accept constructive comments / criticism				
	4.4 Responsiveness to supervision				

<b>5.</b>	<b>Attitude: Establishing Relationship</b>				
	5.1 Able to function with other health care professional.				
	5.2 Good rapport with staff, clients and family.				
	5.3 Understanding multicultural issues/ individual differences.				
<b>6.</b>	<b>Attitude: Initiatives</b>				
	6.1 Able to search for learning activities.				
	6.2 Search further information when needed.				
	6.3 Seek supervision / consultation when needed.				
<b>7.</b>	<b>Knowledge and Skill:-</b>				
	7.1 Apply theory to practice appropriately				
	7.2 Identify client's needs or problems.				
	7.3 Demonstrate ability to solve problems.				
	7.4 Plan, implement and evaluate care.				
<b>8.</b>	<b>Documentation:</b>				
	8.1 Accurate documentation				
	8.2 Assess and report abnormal data

## **IMPORTANT INSTRUCTION TO STUDENTS**

Compile the following documents for submission:-

1. Clinical Practice Records:
  - Record of General Practice Hours
  - Record of Specialized Practice Hours
  - Record of Bedside Teaching sessions attended
2. Nursing Procedures:
  - List of Major Procedures performed
  - List of Minor Procedures performed
3. Clinical Performance Evaluation Form - by the Clinical Preceptor
4. Use the Format for Front Page as provided in Appendix 4

You must submit the compilation of your work on NBNC1307 Clinical Practice 11 to your course Tutor immediately after the Oral Presentation of your Case Study.

***BLS for Healthcare Providers Student Manual***  
**Comparison Sheet**  
**Based on 2010 AHA Guidelines for CPR and ECC**

<b>BLS Changes</b>			
	<b>New</b>	<b>Old</b>	<b>Rationale</b>
<b>CPR</b>	Chest compressions, Airway, Breathing (C-A-B)  New science indicates the following order: <ol style="list-style-type: none"> <li>1. Check the patient for responsiveness and no breathing.</li> <li>2. Call for help and get the AED</li> <li>3. Check the pulse.</li> <li>4. Give 30 compressions.</li> <li>5. Open the airway and give 2 breaths.</li> <li>6. Resume compressions.</li> </ol>	Airway, Breathing, Chest compressions (A-B-C)  Previously, after responsiveness was assessed, a call for help was made, the airway was opened, the patient was checked for breathing, and 2 breaths were given, followed by a pulse check and compressions.	Although ventilations are an important part of resuscitation, evidence shows that compressions are the critical element in adult resuscitation. In the A-B-C sequence, compressions are often delayed. By changing the sequence to C-A-B, rescuers can start chest compressions sooner..
	Compressions should be initiated within 10 seconds of recognition of the arrest.	Compressions were to be given after airway and breathing were assessed, ventilations were given, and pulses were checked.	Although ventilations are an important part of resuscitation, evidence shows that compressions are the critical element in adult resuscitation. Compressions are often delayed while providers open the airway and deliver breaths.
	Compressions should be given at a rate of at least 100/min. Each set of 30 compressions should take approximately 18 seconds or less.	Compressions were to be given at a rate of about 100/min. Each cycle of 30 compressions was to be completed in 23 seconds or less.	Faster compressions are required to generate the pressures necessary to perfuse the coronary and cerebral arteries.
	Compression depths are as follows: <ul style="list-style-type: none"> <li>x Adults: <b>at least</b> 2 inches (5 cm)</li> <li>x Children: <b>at least</b> one third the depth of the chest, approximately 2 inches (5 cm)</li> <li>x Infants: <b>at least</b> one third the depth of the chest, approximately 1½ inches (4 cm)</li> </ul>	Compression depths were as follows: <ul style="list-style-type: none"> <li>x Adults: 1½ to 2 inches</li> <li>x Children: one third to one half the diameter of the chest</li> <li>x Infants: one third to one half the diameter of the chest</li> </ul>	Deeper compressions are required to generate the pressures necessary to perfuse the coronary and cerebral arteries.

Adapted from American Heart Association

<b>Airway and Breathing</b>	Cricoid pressure is no longer routinely recommended for use with ventilations.	If an adequate number of rescuers was available, one could apply cricoid pressure.	Randomized studies have demonstrated that cricoid pressure still allows for aspiration. It is also difficult to properly train providers to perform the maneuver correctly.
	“Look, listen, and feel for breathing” has been removed from the sequence for assessment of breathing after opening the airway. Healthcare providers briefly check for breathing when checking responsiveness to detect signs of cardiac arrest. After delivery of 30 compressions, lone rescuers open the victim’s airway and deliver 2 breaths.	“Look, listen, and feel for breathing” was used to assess breathing after the airway was opened.	With the new chest compression–first sequence, CPR is performed if the adult victim is unresponsive and not breathing or not breathing normally (i.e. not breathing or only gasping) and begins with compressions (C-A-B sequence). Therefore, breathing is briefly checked as part of a check for cardiac arrest. After the first set of chest compressions, the airway is opened and the rescuer delivers 2 breaths.
<b>AED Use</b>	<p>For children from 1 to 8 years of age, an AED with a pediatric dose-attenuator system should be used if available. If an AED with a dose attenuator is not available, a standard AED may be used.</p> <p>For infants (&lt;1 year of age), a manual defibrillator is preferred. If a manual defibrillator is not available, an AED with a pediatric dose attenuator is desirable. If neither is available, an AED without a dose attenuator may be used.</p>	This does not represent a change for children. In 2005 there was not sufficient evidence to recommend for or against the use of an AED in infants.	<p>The lowest energy dose for effective defibrillation in infants and children is not known. The upper limit for safe defibrillation is also not known, but doses &gt;4 J/kg (as high as 9 J/kg) have provided effective defibrillation in children and animal models of pediatric arrest, with no significant adverse effects.</p> <p>AEDs with relatively high energy doses have been used successfully in infants in cardiac arrest, with no clear adverse effects.</p>

Adapted from American Heart Association

**RUBRICS FOR CLINICAL WRITE-UP (CASE STUDY)**

**COURSE CODE : NBNC 1307 CP11 (CRITICAL CARE NURSING)**

Criteria	Weight-age	(0)	Low (1)	Fair (2)	Above Average (3)	Excellent (4)	Score
